

Crazy 8 Conversion From Right Hand To Left Hand

This sight is specifically designed to allow both right handed and left handed bow hunters to use the same model sight without any loss of functionality. The sight comes packaged in a right hand configuration but by following the steps below it can easily be converted to a left hand configuration.

Reorientation of the level and glow ring

1. Remove level and level mount by loosening the two #4-40 button head cap screws.
2. Using a knife, carefully remove the glow ring and white level backing tape.

3. Reinstall the glow ring 180 degrees from its previous position.

4. Reinstall the white level backing tape on the opposite end of the pin guard.

5. Reinstall the level and level holder using the second set of mounting holes located on the opposite end of the pin guard. You are then ready to mount the sight to the bow.
